Sub: Aeration and Bio Remediation of the Banjara Lake-

Dear Sir,

We would state that the aeration system installed by you in September 2015 is in continuous operation .

We appreciate periodic service visits by your personnel to ensure the proper running of the aeration system.

We observed that when the continuous running system is stopped or turned off, strong odor was felt and mosquito breeding increased causing discomfort us and to our guests. .

Better performance was experienced when the aeration was augmented with the bio products initially during the project trial, The algae had died, the transparency was increasing and the odor reduced.

We would request you to please provide the bio product dosing as above to achieve satisfactory results..

We understand your requirement to prevent sewage inflow into the lake and we would continue to request the Government of Telangana to do the needful

You may please note that we supported you with a proper housing for the aeration system and provided electricity to run the system on a 24-hour operational cycle.

You are requested to ensure uninterrupted aeration system

Best Regards
