Re: Millersville University Pond

Rich,

The Millersville University pond is located in the center of the campus and is an inviting place to relax on the benches around the pond. It is also a prominent location on the tour path for perspective students visiting the campus. A few years ago it was observed that the pond was filling up with organic debris from the surrounding trees and taking on a murky appearance. Early in 2015 we had some fish die and we knew we needed to do something quickly to remediate this situation. We first considered dredging the pond but the expense was high and the time to acquire permits would further jeopardize the pond appearance. It was at this time we were referred to Clean-Flo as a possible solution for our pond. Clean-Flo analyzed our pond water, designed the solution and had all the equipment in place in about a month. We are now approaching a year that the system has been installed and the pond looks great! It has a way to go to decompose the organics that are in it, but the water is clear and we are able to see the pond bottom in locations. This was done at a fraction of the cost of dredging and the fish are noticeably happier as well!

Sincerely,

Greg Petruno, P.E.  
Project Manager  
Millersville University
